

A Linked Data Competency Framework for Educators and Learners

Marcia Lei Zeng
Kent State University, USA

On behalf of
LD4PE (Linked Data for Professional Education) Project Team

2

Outline

- Part I. Background
 - Linked Data for Professional Education (LD4PE) project
 - LD4PE Major Products
- Part II. The *Competency Index for Linked Data*
- Part III. Learning Resources Connected with the Competencies
- Part IV. Using the *Competency Index for Linked Data* in Self-Learning, Teaching, and Training

M.Zeng & LD4PE Team

Part I. Background

Linked Data for Professional Education (LD4PE) project

<http://explore.dublincore.net/>

M.Zeng & LD4PE Team

Linked Data for Professional Education (LD4PE) Project

- Funded by the Institute of Museum and Library Services (IMLS)
 - December 1, 2014 - November 30, 2017
- A project under the jurisdiction of the DCMI Education & Outreach Committee
- Led by:
 - University of Washington, Information School. **Michael Crandall**, P.I.
 - Kent State University, School of Information.
 - Dublin Core Metadata Initiative (DCMI).
- Content Partners:
 - Sungkyunkwan University (Korea)
 - Access Innovations
 - Synaptica
 - Elsevier
 - OCLC
- Technical development:
 - Joseph Chapman
 - David Talley

LD4PE Major Products

5

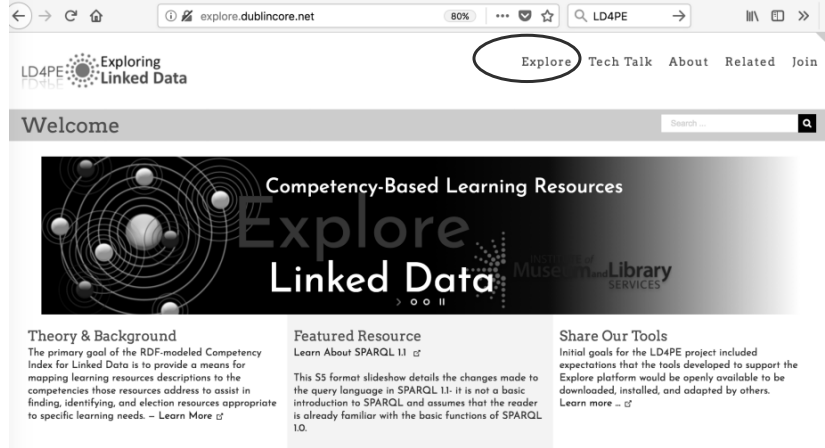

Competency Index for Linked Data

-- defines a set of assertions of the knowledge, skills, and habits of mind required for professional practice in the area of Linked Data.

Learning Resource Descriptions

-- A set of learning resources

- open sources
- described in metadata
- mapped to competencies

Explore Learning Resources by Competency

Browse by Competency

How does this work?

+ New Comp Index (621)

- + Fundamentals of Resource Description Framework (218)
- **Fundamentals of Linked Data (135)**
 - + Web technology (93)
 - Linked Data principles (66)

Knows Tim Berners-Lee's principles of Linked Data: use URIs to name things, use HTTP URIs that can be resolved to useful information, and create links to URIs of other things. (0)
 - Linked Data principles (66)

Knows the "five stars" of Open Data: put data on the Web, preferably in a structured and preferably non-proprietary format, using URIs to name things, and link to other data. (66)
- + Linked Data policies and best practices (16)

To Explore Linked Data learning resources, select a competency assertion or topic statement in the adjacent panel to view a listing of associated learning resources.

The *Competency Index for Linked Data* (CI) constitutes a set of topically arranged assertions of the knowledge, skills, and habits of mind required for professional practice in the area of Linked Data.

This structure is *illustrated* in the adjacent panel. CI development is expected to openly crowd-source expertise in the development processes under the guidance of the project's CI Editorial Board (CIEB). Learn more about the Competency Index.

IMPORTANT NOTES:

- The CI development work is being partially funded through an IMLS *National Leadership Grant for Libraries*.
- Those interested in more detail on the Competency Index development and maintenance process, or who would like to contribute to future development can see more here. A fully translated Chinese version of the CI and associated documentation is also available here.

Part II. Introducing the *Competency Index for Linked Data*

9

The *Linked Data Competency Index* provides:

- a concise and readable map of concepts and skills
- related to practices and technologies of Linked Data
- for the benefit of interested learners and teachers.

M.Zeng & LD4PE Team

“Competency Index”

- A thematic set of competencies organized by:

- **Topic**

- **Competency**

- ❖ *a tweet-length phrase about knowledge or skills that can be learned*

- **Benchmark**

- ❖ *an action that demonstrates accomplishment in a given competency*

Topical Cluster » Topic » Competency » Benchmark

M.Zeng & LD4PE Team

10

Example

Topic cluster: Interacting with RDF Data

• Topic: Querying RDF Data

- **Competency:** Understands that a SPARQL query matches an RDF graph against a pattern of triples with fixed and variable values
- **Competency:** Understands the basic syntax of a SPARQL query
 - **Benchmark:** Uses angle brackets for delimiting URIs.
 - **Benchmark:** Uses question marks for indicating variables.
 - **Benchmark:** Uses PREFIX for base URIs.

understanding

doing

SPARQL query example

```
Query Text
PREFIX dataset: <http://dbpedia.org/ontology/>
SELECT ?uri ?influencedBy
WHERE
{
  ?uri a dataset:Artist .
  ?uri dataset:influencedBy ?influencedBy .
  filter regex(?influencedBy, 'Pablo_Picasso', 'i') .
}
```

Understanding

Followed guidelines for
stylistic consistency
when competencies
were developed.

Competencies

- Understands
- Knows
- Recognizes
- Differentiates ...

understanding
(learning)

Benchmarks

- Uses
- Expresses
- Demonstrates
- Distills
- Converts ...

doing (exam questions,
homework assignments)

M. Zeng & LD4PE Team

The development of the Competency Index for Linked Data

Editorial Board met monthly over a period of approximately 18 months. Tom Baker, chair

- Expert input
- User testing

Tries to cover:

- **Enough topics** to convey a map of the domain
- **Enough detail** on domain competency

Does NOT cover:

- NOT: Levels of difficulty
 - “Basic” for a library scientist may be “difficult” for a computer scientist (and vice versa)
- NOT: Ranking or ordering topics
 - for the same reasons

Competency Index for Linked Data

1. Fundamentals of Resource Description Framework

- Identity in RDF
- RDF data model
- Related data models
- RDF serialization

Fundamentals of Resource Description Framework (218)

- + Identity in RDF (38)
- + RDF data model (148)
- + Related data models (52)
- RDF serialization (66)
 - Understands RDF serializations as interchangeable encodings of a given set of triples (RDF graph). (30)
 - Uses tools to convert RDF data between different serializations. (7)
 - Distinguishes the RDF abstract data model and concrete serializations of RDF data. (41)
 - Expresses data in serializations such as RDF/XML, N-Triples, Turtle, N3, Trig, JSON-LD, and RDFa. (33)

M.Zeng & LD4PE Team

Competency Index for Linked Data

6 clusters
15

30 topics

95 competencies

1. Fundamentals of Resource Description Framework
2. Fundamentals of Linked Data
 - Web technology
 - Linked data principles
 - Linked Data policies and best practices
 - Non-RDF Linked Data

Fundamentals of Linked Data (135)

- + Web technology (93)
- Linked Data principles (66)
 - ↳ Knows Tim Berners-Lee's principles of Linked Data: use URIs to name things, use HTTP URIs that can be resolved to useful information, and create links to URIs of other things. (0)
 - ↳ Knows the "five stars" of Open Data: put data on the Web, preferably in a structured and preferably non-proprietary format, using URIs to name things, and link to other data. (66)
- + Linked Data policies and best practices (16)

Non-RDF linked data (0)

M.Zeng & LD4PE Team

Competency Index for Linked Data

1. Fundamentals of Resource Description Framework
2. Fundamentals of Linked Data
3. RDF vocabularies and application profiles
 - Finding RDF-based vocabularies
 - Maintaining RDF vocabularies
 - Versioning RDF vocabularies
 - Publishing RDF vocabularies
 - Mapping RDF vocabularies
 - RDF application profiles
 - Designing RDF-based vocabularies

Designing RDF-based vocabularies (142)

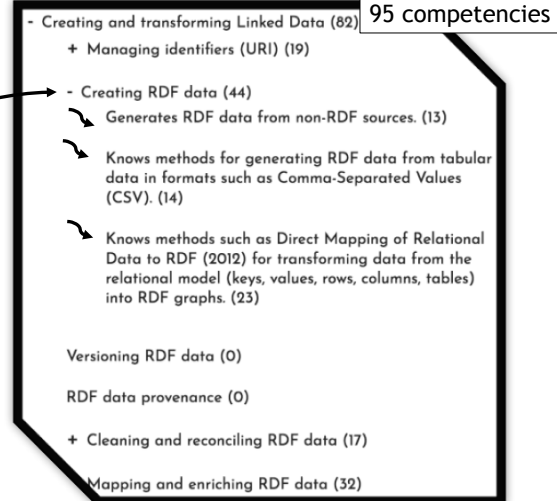

- + Uses RDF Schema to express semantic relationships within a vocabulary. (53)
 - ↳ Knows the naming conventions for RDF properties and classes. (9)
 - ↳ Reuses published properties and classes where available. (32)
 - ↳ Coins namespace URIs, as needed, for any new properties and classes. (1)
- Designing RDF-based vocabularies (142)
 - ↳ Uses RDF Schema to express semantic relationships within a vocabulary. (53)
 - ↳ Correctly uses sub-class relationships in support of inference. (22)
 - ↳ Correctly uses sub-property relationships in support of inference. (25)
 - ↳ Knows the naming conventions for RDF properties and classes. (9)
 - ↳ Reuses published properties and classes where available. (32)
 - ↳ Coins namespace URIs, as needed, for any new properties and classes required. (14)
 - ↳ Drafts a policy for coining URIs for properties and classes. (1)
 - ↳ Chooses "hash"- or "slash"-based URI patterns based on requirements. (9)

The resource description page contains additional metadata and full text of the description.

An Introduction To Linked Open Data

An extensive slide presentation covering the key components that support RDF: the graph model, the triple statement, and URIs. Also discusses the Web of Data and the principles behind Linked Data (including Open Data). The SPARQL query language is given a high-level overview, as is how inferencing can be achieved using RDF Schema and Web Ontology Language (OWL) or Simple Knowledge Organization System (SKOS). At key points the presentation stops so that the audience can engage in group exercises (prompts included).

URL: http://swib.org/swib14/slides/ostrowski_swib14_45.pdf ↗

Keywords: Simple Knowledge Organization System (SKOS), Graph, Triple, HTTP URIs, Web Ontology Language (OWL), RDF Schema, Linked Open Data, Web of Data, Linked Data Principles

Author: Ostrowski, Felix

Publisher: Hbz

Date created: 2014-12-01 07:00:00.000

Language: <http://id.loc.gov/vocabulary/iso639-2/eng>

Time required: P90M

Interactivity type: mixed ↗

- Competencies
 - Knows Simple Knowledge Organization System, or SKOS (2009), an RDF vocabulary for expressing concepts that are labeled in natural languages, organized into informal hierarchies, and aggregated into co
 - Knows that anything can be named with Uniform Resource Identifiers (URIs), such as agents, places, events, artifacts, and concepts.
 - Knows the "five stars" of Open Data: put data on the Web, preferably in a structured and preferably non-proprietary format, using URIs to name things, and link to other data.

From this page, you can access the resource itself through the URL.

M.Zeng & LD4PE Team

Another example →

Publishing Data From The Smithsonian American Art Museum As Linked Open Data

This video discusses the challenges faced when publishing museum data as Linked Data: the databases are large and complex; the information is richly structured and varies from museum to museum; it is difficult to link the data to other datasets. The speaker demonstrates the end-to-end process of starting with the original source data, modeling the data with respect to an ontology of cultural heritage data, linking the data to DBpedia, and then publishing the information as Linked Open Data.

URL: <https://www.youtube.com/watch?v=1VaytrO9H1w> ↗

Keywords: Ontology, Karma, R2RML, DBpedia

Author: Szekely, Pedro

Date created: 2013-07-24 07:00:00.000

Language: <http://id.loc.gov/vocabulary/iso639-2/eng>

Time required: P10M

Educational use: instruction ↗

Educational audience: student ↗

Interactivity type: expositive ↗

- Competencies
 - Knows methods for generating RDF data from tabular data in formats such as Comma-Separated Values (CSV).
 - Uses available resources for named entity recognition, extraction, and reconciliation.

M.Zeng & LD4PE Team

Learning Map

E.g., for Catalogers, what are the key competencies?

Learning Map: Competencies for Catalogers
 What's This?
 Considers the paradigm shift necessary to catalog to an expanded audience (the Web) as well as technical details involved.

Understands that Linked Data (2006) extended the notion of a web of documents (the Web) to a notion of a web of finer-grained data (the Linked Data cloud).
 69 resources

Knows Tim Berners-Lee's use of HTTP URIs and URIs of other protocols.
 0 resources

Knows that URIs are Resource Locators and independent of protocols.
 18 resources

Understands that URIs are distinct from identifiers.
 0 resources

Knows the syntax of URIs.
 46 resources

Understands that URIs are used to identify resources.
 53 resources

Knows that URIs are required.
 14 resources

Knows Simple Knowledge Organization System (SKOS) vocabulary for expressing competencies organized into information.
 24 resources

Understands the use of datatypes and language tags with literals.
 15 resources

Knows graphic conventions for depicting RDF-based models.
 10 resources

Distinguishes the RDF abstract data model and concrete serializations of RDF data.
 41 resources

Recognizes that owl:sameAs is a formal semantics that denotes identity.
 13 resources

Identifies resource attributes and candidates for RDF properties.
 9 resources

Uses RDF Schema to express constraints.
 53 resources

Knows that URIs are required.
 14 resources

Knows Simple Knowledge Organization System (SKOS) vocabulary for expressing competencies organized into information.
 24 resources

Knows SKOS extension for Labels, or SKOS-XL (2009), a small set of additional properties for describing and linking lexical labels as instances of the class Label.
 4 resources

Managing identifiers (URI)
 19 resources

Creating RDF data
 44 resources

Cleaning and reconciling RDF data
 17 resources

Mapping and enriching RDF data
 32 resources

Knows the SPARQL 1.1 Update language for updating, creating, and removing RDF graphs in a Graph Store
 32 resources

Understands the difference between SQL query language (which operates on database tables) and SPARQL (which operates on RDF graphs).
 43 resources

- Below each competency, the number of tagged resources are listed.
- Clicking this link will take you to these resources.

M. Zeng & LD4PE Team
31

2. Saved Sets – resources

The screenshot shows the 'Exploring Linked Data' website. On the left, there's a 'Browse by Competency' section with a list of competencies and their resource counts. Below it, there's a 'Saved Sets of Learning Resources' section with a link to 'Competency-based Learning Maps'. On the right, there's a 'Saved Sets' section with a list of saved sets, including 'Resources for Catalogers' and 'Resources for Data Scientists'. A red circle highlights the 'Saved Sets' link in the top navigation bar, and an arrow points from it to the 'Saved Sets' section on the right.

- Curated collection of learning resources
- Targeted to a specific audience or theme
- Each item links to a resource's description page

WorldCat Linked Data (Library Science Subset)

Extracted from the original MARC records based on:

- FAST headings
- DDC classes
- LCC subclasses

Why provide a dataset?

- You have static data to test skills on or to use in creating new learning resources
- Ensures that consistent results can be obtained from queries and that access will not suddenly disappear

OCLC Dataset

The Online Computer Library Center (OCLC) has published a dataset, WorldCat Linked Data (Library Science Subset), so that those who visit the LD4PE site will have static data to test their skills on or to use in creating their own learning resources. Using the WorldCat dataset for these pursuits ensures that consistent results can be obtained from queries and that access to the dataset will not suddenly disappear.

Access the static dataset at: <http://purl.org/net/dataset/WorldCat/LibraryScienceSubset>

A tutorial and some example queries are available for those interested in getting started in using this resource.

This dataset identifies and describes bibliographic resources gleaned from library, archives, and museum data from around the world. This subset is focused on bibliographic resources broadly related to the theme of library science. Specifically, resource descriptions were extracted from the original MARC records if they met at least one of the following criteria:

- FAST headings "library", "libraries", "librarian", or "librarianship" in field 650
- DDC classes "Library & information sciences" (020 through 028) in field 082
- LCC subclasses for "Libraries" (Z662 through Z1000.6)
- "Information resources (General)" (ZA 3038 through ZA 5190) in field 050.

Records with "N@" in the 040 field (name of the organization that created the original record) were excluded. Download more detailed information (PDF 439KB)

A tutorial and some example queries are available for those interested in getting started in using this resource.

TUTORIAL :

- DOWNLOAD DATASET
 - N-Triples
- STORE PERSISTENTLY
 - Apache Jena's TDB (Triple Store)
- Query using SPARQL
 - Command Line using TDBQUERY (similar to ARQ)
 - Interpreting and storing results

```

get:AmnTray: %wget
file:///home/.../...
PREFIX schema: <http://schema.org/>
SELECT DISTINCT ?s FROM
WHERE {
  ?s a schema:Book;
  schema:isLanguage "fr";
  schema:isbn "9780130270941".
}

```

Figure 12: SPARQL query to retrieve all books written in French

Introduction

This tutorial was created both to highlight the potential of the Competency Index. Early sections address topics related to SPARQL queries introduce the broad topic of "Querying RDF sets. Finally, a series of exercises prompt the user to write more advanced uses of SPARQL functions and operators that make

There are a great number of SPARQL tutorials on the Web, but which do not always hold true in real-life cases:

1. That the dataset the user wants to query is relatively small
2. That if the user is querying a massive database (e.g., DBpedia)

What does the user do when he or she discovers that their dataset contains over twenty million triples? The WorldCat Dataset is

There are many different tools available for storing and querying, ultimately be used. This tutorial represents only one possible Dataset and start exploring it as quickly as possible and, hopefully,

Accessing the Dataset

One way that a colleague has given you a link to a dataset: how

Download detailed introductory information (PDF, 274KB)

Storing the Data

Before you can start querying the data, we need to load it into Apache Jena's TDB.

Download instructions for storing the dataset (PDF, 115KB)

Querying the Data

When faced with a new and unfamiliar dataset, it is helpful to describe the data. Without this knowledge, writing queries is difficult and can quickly give you an idea what a dataset is all about.

Download exercises for exploratory queries (PDF, 174KB)

PDFs AVAILABLE:

37

Simple Queries

The following sections contain walkthroughs for some simple queries for users new to the SPARQL query language.

Simple Query 1: Union and Shared Subjects

Start with this query: *What languages are represented in the dataset?*

To write this query, you need to determine one vital piece of information. Fortunately, you already know all the classes and properties used in the dataset. You can skim through the result set you saved, you see that the following schema.org/inLanguage:

To determine which property you should use in future queries, you can give you an idea how the dataset's creators used these properties.

Download exercises for Simple Query 1 (PDF, 149KB)

Simple Query 2: Optional and Turning an Object into a Subject. Now that we know which properties are used to describe books, let's limit the type of Creative Works we are looking for to books. Let's string together a few triple statements.

Download exercises for Simple Query 2 (PDF, 203KB)

Simple Query 3: Negation Using Not Exists and Minus. What if, on the hand, we had wanted to write a query specific to books in other languages (i.e., works originally written in French)? Let's try a topic of NEGATION.

Download exercises for Simple Query 3 (PDF, 118KB)

Additional SPARQL Exercises

You are now ready to try writing some queries on your own. Each section includes an exercise which accomplish each task (answers).

Download SPARQL exercises (PDF, 128KB)

Download exercise answer walkthrough (PDF, 169KB)

Summary (1)

38

*Competency Index for Linked Data***What is a competency index used for?**

- Describes what a learner can learn.
- Describes skills that demonstrate understanding.
- Basis for:
 - job descriptions
 - course syllabi
 - university degrees
 - micro-credentials
 - digital badges
- Tags descriptions of learning resources...

Summary (2)

Competency Index for Linked Data

39

Who can benefit from it?

- **Students:** help choose courses that cover what you want to learn.
- **Instructors:** design a course, syllabus, homework, quizzes, exams.
- **Self-learners:** explore technologies and methods related to Linked Data.
- **Employers:** write a job description.
